

EVALUATION SHEET

1. Project details

Client: *vanbrabant NV*
Project name: *Planting cherry trees on private property*
Evaluated by: *Rudy vanbrabant*
Application date: *December 2016*
Evaluation date: *December 2019*
Site conditions: *Sandy soil, elevated plot*
Other: *12,000 Prunus Cerasus "Kellerís" in 30x30x30cm plant holes*
Rate & method: *40g per plant hole; 480kg TerraCottem® Universal in total*

2. Information about of the use of TerraCottem®

Planting: 12/2016

04/2017

06/2017

04/2018

- ✓ For which of the following applications did you use TerraCottem® Universal (scientific name preferred)?

Trees species: *Prunus Cerasus "Kellerís"*
 Shrubs species: -

- ✓ Which issues did you have to deal with prior to using TerraCottem® Universal in the above applications?

- *The plot is part of a bigger estate and is more elevated than the rest of the land. As such it is more exposed to wind and has a relative lower water infiltration.*
- *The soil is sandy, with low water retention.*
- *No additional irrigation is provided.*

- ✓ What did you want to achieve by using TerraCottem® Universal?

Optimizing natural soil water management resulting in the highest possible survival rate.

- ✓ Did you achieve your aim?

Yes No

3. Additional comments

None of the 12,000 trees planted died: a survival rate of 100% was observed!
